## Beyond Visual Connects with CanWISP to Advance Drone-Enabled Opportunities for Canadian ISPs

*Company Participates in CanWISP Meeting, Spotlighting How BVLOS Operations Are Opening New Revenue Frontiers for Wireless Internet Providers*

CALGARY, AB — May 15, 2026 — Beyond Visual Canada Inc., a leading regulatory and compliance consultancy for the commercial drone industry, today commented on its participation in the CanWISP Meeting held March 30 to April 1, 2026.

Beyond Visual's presence at CanWISP's Board Meeting reflects the company's commitment to enable providers to extend their networks, forge new partnerships with certified drone operators, and accelerate deployment timelines in rural and remote corridors where traditional access methods fall short.

*"The feasibility and benefit of new use cases will become increasingly apparent as exciting advances in aircraft design and BVLOS operating systems enable commercial UAS operations."*

— **Richard Brown, COO, Beyond Visual Canada Inc.**

Central to Beyond Visual's messaging was the accelerating evolution toward Beyond Visual Line of Sight (BVLOS) operations — widely regarded as the next frontier in commercial UAS capability. Sectors including precision agriculture, geospatial mapping, land surveying, and critical infrastructure inspection are increasingly reliant on BVLOS-enabled flights to achieve the scale, efficiency, and data fidelity that modern operations demand.

For ISPs, this shift carries direct strategic relevance: reliable, high-throughput connectivity is a prerequisite for real-time UAS command-and-control links, live sensor data uplinks, and the cloud-based analytics pipelines that underpin BVLOS workflows.

Adding to the energy of the meeting, Lee Sandy (Sichuun Inc., Schefferville, QC) was selected as the winner of the randomized member draw for a DJI Neo — a 135g, ultra-lightweight, and compact consumer drone engineered for effortless palm takeoff and landing, as well as automated, controller-free subject tracking, making it a standout tool for content creators and vloggers.

Beyond Visual's engagement with CanWISP in 2026 reinforces the company's broader mission: to serve as a trusted navigator for all stakeholders in the drone ecosystem — from manufacturers seeking type certification to operators pursuing complex BVLOS approvals — while forging the cross-sector partnerships that will define the next chapter of Canada's commercial UAS industry.

## **ABOUT BEYOND VISUAL CANADA INC.**

Beyond Visual Canada Inc. is a regulatory and compliance consultancy specializing in the commercial unmanned aerial systems (UAS) industry. The company navigates the complexities of domestic and international drone regulation on behalf of manufacturers, operators, and service providers, delivering expert guidance across certification, Special Flight Operations Certificates (SFOCs), BVLOS approvals, and Transport Canada compliance pathways. Beyond Visual's multidisciplinary team partners closely with clients to craft tailored solutions that accelerate market entry, ensure operational confidence, and unlock the full commercial potential of drone platforms. With a growing roster of clients who have successfully achieved their regulatory objectives, Beyond Visual has established itself as a proven partner for those seeking to soar freely — and compliantly — in an increasingly complex global airspace environment.

## **ABOUT CANWISP**

The Canadian Wireless Internet Service Providers Association (CanWISP) represents wireless ISPs committed to delivering voice, video, and data connectivity to rural and exurban communities across Canada, ensuring all Canadians have access to the interconnected world. CanWISP members live and work in the communities they serve, maintaining a responsive and responsible approach to broadband delivery. The association collaborates with government and industry stakeholders to promote the efficient and equitable use of spectrum — a vital public resource — and to develop and champion best practices that advance connectivity for underserved Canadians.
